

HUHENG SMART TECHNOLOGY - EQUIPMENT OPERATION MANUAL

This fictional manual defines safe startup and inspection for a test collection unit.

Before operation, verify the enclosure, power lead, charging dock, and status indicator.

Use only the approved adapter. A damaged cable requires immediate LOCKOUT and inspection.

Record the equipment identifier, inspection result, and operating purpose in the local log.

HUHENG SMART TECHNOLOGY - CONTROLLED SHUTDOWN AND RESTART

For normal shutdown, save the task, stop acquisition, and disconnect all accessories.

If heat, odor, liquid, or unstable power is observed, isolate the unit and notify support.

After repair, inspect the enclosure and cable, then perform a controlled RESTART check.

This fixture is synthetic, contains no production secret, and creates no warranty promise.
